

Executive Updates from the Office of the VP Administration (August 5th)

These past weeks, my team has been occupied with preparing AMS CampusBase for its release. This was met with the need to revise the Student Data MoU between the AMS and UBC which has been completed as well as the integration of CWL as our single sign on feature for accessing the platform (which is in the process of completion). With this, we have also begun the creation of separate student data MoUs with each of our affiliate institutions in order to better include them in all of our communication and programming moving forward.

Updates:

☐ Clubs

- All AMS Club Executives have been contacted via a newsletter (July 29th) about their onboard process for AMS CampusBase. Executives will receive email invites today, to begin creating their group pages while we await the completion of the CWL integration. All AMS Services and Undergraduate Societies have also been communicated with and will be receiving access today as well.
- Some AMS Clubs have been chosen to represent the society during JumpStart by creating workshops that will be included in JumpStart programming for incoming first years. This was one of the goals of the Operations Committee in finding more ways to get our clubs engaged and our team is glad we were able to accomplish this.

☐ Hatch

- Scheduling exhibitions for the year is still ongoing. We have settled on a few options for our hatch website and will begin setting it up this week in hopes of having it ready to launch in the first week of September. This website will have a viewing room that allows exhibitions to translate into an online visual representation and will aid in the necessary programming that has been planned to accommodate for reduced in-person gallery capacities.

☐ Sustainability

- The AMS Sustainability report has been amended as requested and an updated version can be found on the AMS website. Additionally, our team is about finalizing our chosen SEEDS projects to be presented to respective faculty and courses which is usually an ongoing process
- The Run-off Garden opposite PiR is being fixed and we are hoping to see some new plants in the Nest as well as elevated animations around the building before the end of August
